# SIDDHARTH SRIVASTAVA

**Java Backend Engineer | Core Java | Spring Boot | Microservices | REST APIs | Application Security**
Bengaluru, Karnataka, India | +91 9003025474 | sid98sksofficial@gmail.com | linkedin.com/in/siddharth-srivastava-27b85112b

## PROFESSIONAL SUMMARY

Application Software Engineer with 6+ years of experience building, modernizing, securing, and operating enterprise healthcare applications at Oracle Health and Cerner. Led framework and dependency modernization across 200+ repositories, remediated 2,000+ CVEs, built AI-driven automation that cut upgrade effort by approximately 80%, and improved automated test coverage from 60% to 90%. Strong in Java, Spring Boot, microservices, REST APIs, distributed systems, CI/CD, production reliability, and technical leadership with 2 years of hands-on experience in Angular-based frontend development.

## CORE SKILLS

**Languages:** Core Java (Java 8/11/17),Python, SQL, Oracle SQL
**Backend:** Spring Boot, Spring Security, Hibernate/JPA (ORM), RESTful Web Services, Microservices
**Frontend:** Angular, TypeScript, JavaScript, HTML, CSS, Component-Based UI Development, REST API Integration
**Architecture:** Distributed Systems, API Design, Design Patterns, Fault Tolerance, Retry Strategies, Idempotency, SOLID, OOP, Multithreading
**Cloud & DevOps:** AWS, Docker, Kubernetes, Maven, GitLab CI/CD, Jenkins, CircleCI, Git, Linux/Unix
**Testing & Quality:** JUnit, Mockito, Integration Testing, Postman, JMeter, LoadRunner, SonarQube, PMD, Checkstyle
**Security & Observability:** Vulnerability Management, CVE Remediation, Secure SDLC, Splunk, Prometheus, APM Dashboards, Jira, Swagger

## PROFESSIONAL EXPERIENCE

**Oracle Health (Oracle)** | **Application Software Engineer 2** *(Hybrid)* **Mar 2025 - Present**

- Lead framework modernization and dependency uplift across 200+ repositories, owning compatibility analysis, code updates, validation strategy, testing, and production rollout.
- Manage vulnerability triage, prioritization, and remediation across enterprise healthcare applications; resolved 2,000+ CVEs while meeting internal security and compliance standards.
- Designed an AI-powered dependency uplift toolkit with automated code generation, dependency analysis, and security scanning; reduced typical upgrade cycles from 2-3 weeks to 3-4 days (approximately 80%) and received Oracle Hackathon special recognition.
- Own GitLab CI/CD and Jenkins pipeline readiness, dependency configuration, testing sign-offs, release coordination, and post-deployment validation.
- Lead a 4-engineer production support function for monitoring, incident response, and operational reliability using Splunk, Prometheus, and APM dashboards; provide technical guidance for Spring Boot services and complex production issues.

**Oracle Health (Oracle)** | **Software Engineer** *(Hybrid)* **Jun 2022 - Mar 2025**

- Modernized monolithic healthcare applications into scalable Spring Boot microservices, developing Core Java backend components and RESTful web services using Spring Security and Hibernate/JPA ORM.
- Designed resilient service-to-service communication patterns with retry handling, fault tolerance, and idempotency.
- Partnered with architects, product managers, and frontend teams to define REST API contracts, backend workflows, and system integrations.
- Improved maintainability through SOLID principles, peer reviews, SonarQube, PMD, and Checkstyle; supported production debugging and release readiness.

**Cerner Healthcare Private Limited** | **Software Engineer** *(Hybrid)* **Aug 2020 - Jun 2022**

- Designed and implemented secure REST APIs for patient management, device integration, and core healthcare workflows using Java and Spring Boot.
- Built unit and integration test suites with JUnit, Mockito, and Postman, increasing automated coverage from 60% to 90% across core services.
- Performed load and stress testing with JMeter and LoadRunner to identify resource leaks, optimize thread utilization, and improve response times; delivered backend features and production fixes in Agile squads.

**Cerner Healthcare Private Limited** | **Software Intern** **Feb 2020 - Aug 2020**

- Developed and refactored Java backend components and wrote JUnit/Mockito tests to validate business logic and improve reliability.
- Participated in sprint planning, daily standups, retrospectives, and code reviews while learning enterprise SDLC and testing standards.

## EDUCATION

**SRM Institute of Science & Technology** **May 2020**
B.Tech in Computer Science and Technology | CGPA: 8.9/10
