

Siddharth Srivastava

Backend Engineer | Java | Spring Boot | Microservices | CI/CD | Application Security

sid98sksofficial@gmail.com | +91 90030 25474 | linkedin.com/in/siddharth-srivastava-27b85112b

PROFESSIONAL SUMMARY

Quality-focused Backend Engineer with **5+ years of experience** designing, modernizing, testing, and operating enterprise-scale healthcare platforms at **Oracle Health, formerly Cerner**. Experienced in Java backend development, Spring Boot microservices, REST API design, CI/CD automation, vulnerability remediation, observability, and production support. Recognized for owning large-scale modernization programs, improving software quality, reducing upgrade effort through automation, and delivering reliable, secure backend services in regulated healthcare environments.

CAREER IMPACT HIGHLIGHTS

- **Modernization at scale:** Led framework modernization and dependency uplift initiatives across **200+ repositories**, covering compatibility analysis, code updates, validation strategy, CI/CD changes, and production rollout readiness.
- **Security remediation:** Triageed, prioritized, and resolved **2,000+ CVEs** across critical healthcare applications while maintaining internal security and compliance standards.
- **Developer productivity:** Built an AI-powered dependency uplift toolkit recognized in an Oracle Hackathon; reduced enterprise upgrade cycles by approximately **80%**, from **2-3 weeks** to **3-4 days**.
- **Quality improvement:** Increased automated test coverage from **60% to 90%** across core services through stronger unit, integration, and API testing practices.
- **Operational leadership:** Led a production support team of **4 engineers** responsible for monitoring, incident response, operational support, and service reliability.

TECHNICAL SKILLS

Languages	Java 8/11/17, SQL, PostgreSQL
Backend Architecture	Spring Boot, Spring Security, Hibernate/JPA, REST APIs, Microservices, API Contracts Distributed Systems, API Design, Fault Tolerance, Retry Strategies, Idempotency, SOLID Principles, OOP, Data Modeling, Multithreading, Concurrent Programming
Cloud/Containers	AWS, Docker, Kubernetes
CI/CD/DevOps	GitLab CI/CD, Jenkins, CircleCI, Git, Build Configuration, Release Readiness, Quality Gates
Testing	JUnit, Mockito, Integration Testing, Postman, JMeter, LoadRunner, Regression Testing
Monitoring	Splunk, Prometheus, APM Dashboards, Production Monitoring, Incident Response
Security/Tools	Vulnerability Management, CVE Remediation, Secure Software Development, Security Compliance, SonarQube, PMD, Checkstyle, Linux/Unix, Jira, Swagger

PROFESSIONAL EXPERIENCE

Oracle Health	
Application Software Engineer	Mar 2024 - Present
▪ Own and execute framework modernization and dependency uplift initiatives across 200+ repositories, covering dependency analysis, compatibility assessment, code updates, build changes, test validation, and production rollout readiness. ▪ Manage end-to-end vulnerability remediation across multiple healthcare applications by triaging security scan results, prioritizing remediation paths, upgrading impacted dependencies, and tracking closure of 2,000+ CVEs. ▪ Designed and built an AI-powered dependency uplift toolkit with dependency analysis, automated code-change generation, security scanning support, and cross-repository upgrade insights. ▪ Reduced average platform upgrade effort by approximately 80%, shortening upgrade cycles from 2-3 weeks to 3-4 days through automation, standardization, and repeatable validation workflows. ▪ Own CI/CD pipeline updates, quality gate alignment, dependency configurations, build troubleshooting, testing sign-offs, and release readiness activities using GitLab CI/CD and Jenkins. ▪ Lead a production support team of 4 engineers responsible for monitoring, incident response, operational support, escalation handling, and reliability-focused follow-up actions. ▪ Improve production observability by building and maintaining dashboards using Splunk, Prometheus, and APM tooling to support faster issue detection, debugging, and service health tracking. ▪ Provide technical guidance for Java and Spring Boot services, including architecture reviews, secure coding practices, dependency decisions, root-cause analysis, and resolution of complex production issues.	

PROFESSIONAL EXPERIENCE CONTINUED

Oracle Health

Software Engineer

Jun 2022 - Mar 2024

- Contributed to modernization of monolithic healthcare applications into scalable, independently deployable microservices using **Spring Boot**, **Spring Security**, and **Hibernate/JPA**.
- Designed resilient service-to-service communication patterns using retry mechanisms, idempotency safeguards, fault-tolerance practices, and defensive API behavior.
- Collaborated with architects, product managers, frontend engineers, and QA teams to design REST API contracts, integration flows, and backend implementation plans.
- Improved code quality and maintainability by applying SOLID principles, peer review practices, and static analysis tools including **SonarQube**, **PMD**, and **Checkstyle**.
- Supported backend services across design, development, testing, release, and production support phases, with a focus on maintainability and operational reliability.

Cerner Healthcare

Software Engineer

Aug 2020 - Jun 2022

- Designed and implemented secure REST APIs supporting patient management, device integration, and core healthcare workflows using **Java** and **Spring Boot**.
- Implemented backend components with clear request validation, exception handling, logging, persistence integration, and maintainable service-layer design.
- Developed unit, integration, and API testing strategies using **JUnit**, **Mockito**, **Postman**, and integration test frameworks to improve release confidence.
- Increased automated test coverage from **60% to 90%** across core services by identifying coverage gaps, strengthening test cases, and improving quality gates.
- Conducted load and stress testing using **JMeter** and **LoadRunner** to identify performance bottlenecks, resource leaks, thread utilization issues, and response-time regressions.
- Partnered with QA and support teams to troubleshoot defects, validate fixes, and reduce avoidable production issues through improved test coverage and review discipline.

Software Intern

Jan 2020 - Aug 2020

- Assisted in development and refactoring of Java-based backend components under senior engineering mentorship.
- Authored unit tests using **JUnit** and **Mockito** to validate business logic, improve maintainability, and support regression testing.
- Participated in Agile ceremonies, sprint planning, code reviews, daily standups, and technical retrospectives while gaining hands-on enterprise software delivery experience.

SELECTED PROJECT

Oracle Hackathon - AI Dependency Uplift Toolkit

- Designed and developed an AI-powered automation toolkit to support dependency update analysis, automated code-change generation, and cross-repository security scanning.
- Built the toolkit to address repetitive enterprise upgrade work, reduce manual dependency review effort, surface security-impacting upgrades, and standardize modernization workflows.
- Reduced average platform upgrade effort by approximately **80%**, improving upgrade turnaround from **2-3 weeks** to **3-4 days**.
- Won the **Oracle Hackathon** and received organizational recognition for developer productivity, automation, and engineering process improvement.

ENGINEERING STRENGTHS

- **Backend ownership:** Take services from design and implementation through validation, release, and production support.
- **Security-first delivery:** Convert security findings into remediated, validated, and release-ready dependency changes.
- **Quality mindset:** Focus on automated testing, regression prevention, static analysis, review discipline, and quality gates.
- **Operational reliability:** Experienced with monitoring, incident response, production debugging, dashboards, and support-team coordination.
- **Automation mindset:** Identify repetitive engineering workflows and convert them into reusable productivity tooling.
- **Collaboration:** Work effectively with architects, product managers, frontend teams, QA, DevOps, and support stakeholders.

EDUCATION

SRM Institute of Science & Technology

B.Tech in Computer Science and Engineering

Graduated: May 2020

CGPA: 8.9/10
